

Assignment 7: RC Robot

For this assignment, you will write a program that makes the Tiny:Bit respond to commands from the IR remote control.

Instructions

Write a program for the Tiny:Bit that listens for button presses from the IR remote control. Then have your robot take different actions depending on which buttons were pressed. You have creative freedom here, but your program should at least do ***all*** the following:

1. Do things when the IR remote buttons are pressed
2. Do something with the headlights
3. Do something with the taillights
4. Do something with the motors
5. Do something with the Micro:Bit display

Optional things to consider:

- Play sounds with the Micro:Bit
- Use the Micro:Bit buttons
- Use the Micro:Bit gestures or tilt sensor for something
- Use the Micro:Bit light level sensor for something
- Use the Tiny:Bit's ultrasonic distance sensor for something

Submit your code on Jupiter Ed. Bring your Tiny:Bit to the next class for show and tell.
